

Take an In-depth Look at the Most Powerful EMR System

EMA Ophthalmology™ with
AXIS™ Image Management

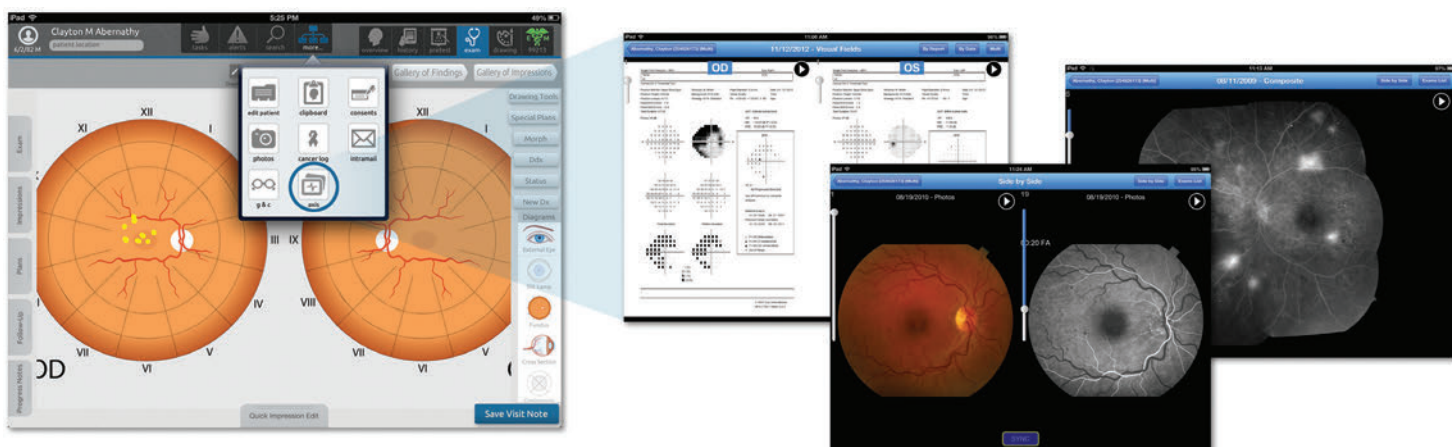

**MODERNIZING
MEDICINE**

A Powerful EMR System Developed Specifically for Ophthalmologists

Modernizing Medicine's **EMA Ophthalmology™** is a cloud-based, specialty-specific electronic medical record (EMR) system with a massive library of built-in medical content and coding expertise, designed to save physicians time. EMA Ophthalmology™ now offers **AXIS Image Management** to bring you a complete patient management system from a single solution, from writing notes, coding and prescribing at the touch of a button to powerful exam image review tools.

What is AXIS?

Every exam, where you need it, when you need it. AXIS™, from Sonomed Escalon, provides ophthalmic image management virtually anywhere, any time. Built on a fast, reliable cloud technology platform, AXIS provides secure centralized access to patient images from virtually any diagnostic imaging device through any web browser or the AXIS™ iPad app.

Why is AXIS useful?

AXIS brings your patient's diagnostic images to your fingertips on your iPad or web browser – while synchronizing with EMA. This allows your complete diagnosis to take place in the exam lane. AXIS' industry-leading image review tools enable in-depth comparison and analysis of exams. By seamlessly integrating with EMA Ophthalmology™, AXIS meets the unique needs of each individual practice.

How does AXIS work?

When the AXIS image management system is enabled in EMA, you can launch the application by touching the "AXIS" button and view all of your patient's diagnostic images without leaving the exam lane. Whether you're using an iPad or a web browser, you can easily switch between both applications, allowing you to spend more time with your patients.

Schedule your personal demonstration to experience why **EMA Ophthalmology** with **AXIS** is the most powerful EMR system on the market today.

EMA is ONC HIT 2014 Edition Certified and is ICD-10 ready. For more information: <http://modmed.com/onc2014>. EMA version 4.0 has achieved ONC HIT 2014 Edition Complete EHR certification and EMA Mobile version 4.0 has achieved ONC HIT 2014 Edition Modular EHR certification. These certifications designate that the electronic health record (EHR) software is capable of supporting eligible providers and hospitals with meeting the Stage 1 and Stage 2 Meaningful Use measures required to qualify for funding under the American Recovery and Reinvestment Act (ARRA).
